BLOOMING GEL

Unlock endless design possibilities with our Blooming Gel. This incredible product enables you to effortlessly create gorgeous “aquarelle” art, floral designs, captivating animal prints and mesmerizing marble effects with your GelPolish collection. Blooming Gel is a universal product that can be used on top of any GelPolish, color gel or acrylic color. Blooming Gel is transparent and can therefore be used over any color, bearing in mind that contrasting colors create the most dramatic effects. Blooming Gel should be cured for at least 60 sec in a LED/UV lamp.

Features & Benefits

- HEMA free
- TPO free
- Efficient - Quick and easy design possibilities for in the salon
- Universal – can be applied over GelPolish, color gel or acrylic color

INSTRUCTIONS FOR USE

1. Buff the natural nail to remove shine.
2. Apply a coat of B-2 Nail Prep to the natural nails to dehydrate the nail plate.
3. Apply a coat of Keystone Base Gel of your choice and cure as recommended.
4. Apply a coat of White GelPolish and cure for at least 60 sec in a LED/UV lamp.
5. Apply a second coat of White GelPolish and cure for at least 60 sec in a LED/UV lamp.
6. Apply a thin coat of Blooming Gel – DO NOT CURE.
7. Using a fineliner brush or dotting tool add beads of a GelPolish of your choice on to the uncured surface. After a few seconds the dots will start spreading slowly creating a beautiful effect.

Note: to create a rose, start painting the petals on wet, uncured gel. Paint from the middle working outwards trying not to overlap the petal layers. There should be a small gap between each petal. After a few seconds the middle parts will start spreading slowly like a marble, creating a beautiful effect.

8. Cure this layer for at least 60 sec in a LED/UV lamp.
9. Apply a coat of Keystone Top Gel of your choice and cure as recommended.
