# FIBER OVERLAY GEL WITH VITAMINS

*Strengthen, Protect, and Grow with Fiber Overlay Gel*

**Transform your natural nails with Fiber Overlay Gel—the ultimate solution for long-lasting, strong, and healthy nails.**

- **Thicker Base & Overlay:** Fiber Overlay Gel provides superior adhesion while filling ridges for a smooth, flawless finish.
- **14+ Days of Wear:** Enjoy durability and beauty that lasts for weeks.
- **Strengthens Nails Naturally:** Synthetic fibers add strength, promoting natural nail growth.
- **Gentle Soak-Off Formula:** Easily remove or switch colors without damaging your nails.
- **Jam-packed with goodness:** Infused with Vitamin E and Calcium.

## HOW TO APPLY INSTRUCTIONS:

### Nail Preparation:

- Buff the natural nail to remove shine.
- Apply a coat of B-2 Nail Prep to the natural nails to dehydrate the nail plate.
- For best results, follow with a layer of Ultrabond of your choice and allow product to dry for approximately 30 seconds (product will remain slightly tacky).

### Gel Application:

- Apply thin layer of Fiber Overlay over entire nail surface being careful to avoid the gel running into the cuticle area.
- Optional: for additional strength and/or shaping - apply an additional bead of product in the center of the nail and distribute evenly across the nail.
- Place nails into the appropriate light and cure for at least 60 sec in a LED/UV lamp. Highly pigmented colors may require an additional cure.
- Optional: Cover the nail with a layer of one of our 300+ colors or effects and cure for at least 60 sec in a LED/UV lamp. If additional coverage is desired, apply a second coat and cure.
- Finish with a Keystone Top Gel of your choice, cure as recommended.

## HOW TO REMOVE INSTRUCTIONS:

- File the top layer.
- Soak nails in Acrylic Remover.
- Remove fingers every 4–5 minutes and remove dissolved gel from the surface with a cuticle pusher or orangewood stick, being careful not to damage the natural nail.
- Repeat soaking until gel is completely removed.

## Warning/Disclaimer

Due to the nature of the product you may observe a slight shade difference between the product in the bottle and the cured product. The cured product is the color we are referencing. Colors may vary slightly depending on the lamp used for curing. To ensure vibrant colors and optimal visual results, we recommend using a Dual Wave lamp.
