FLEXR GEL

HOW TO APPLY INSTRUCTIONS:

- 1. Buff the natural nail to remove shine.
- 2. Apply a coat of B-2 Nail Prep to the natural nails to dehydrate the nail plate.
- 3. Apply a coat of Ultrabond of your choice to the natural nails.
- 4. Place a bead of FlexR Gel of your choice in the center of the nail. Work a thin layer of gel toward the cuticle and extend onto the tip or form. Avoid product contact with the cuticle area to prevent lifting.
- 5. Place nails into the appropriate light and cure for at least 60 sec in a LED/UV lamp. When working with pigmented gels we would recommend a double cure.
- 6. Apply a second layer of FlexR Gel to the nail surface and cure as instructed above.
- 7. Remove the tacky layer with High Shine Wiping Solution.
- 8. File and shape the nail. Remove dust.
- 9. Finish with a Keystone Top Gel of your choice, cure as recommended.

Disclaimer:

- Colors may vary slightly between the different FlexRs.
